**Table 3: Univariate Event-free survival (EFS) according to histological response to induction chemotherapy and mifamurtide.**

	n	5-year EFS (95%CI)	P value
<b>Good responder</b>			
MAP+mifamurtide	87	83.5% (73.7-89.9)	0.1238
MAP	77	73.5% (61.5-82.3)	
<b>Poor Responder</b>			
MAP+HDIFO+mifamurtide	115	62.5% (52.7-70.8)	0.0454
MAP	112	47.0% (36.9-56.4)	

Original Reports | Pediatric Oncology

## Is There a Role for Mifamurtide in Nonmetastatic High-Grade Osteosarcoma? Results From the Italian Sarcoma Group (ISG/OS-2) and Spanish Sarcoma Group (GEIS-33) Trials

Emasuela Palmieri, MD, PhD<sup>1</sup>, Cristina Meazza, MD<sup>2</sup>, Angela Tamburini, MD<sup>2</sup>, Catalina Márquez-Vega, MD<sup>3</sup>, Gianni Bioglio, MD<sup>4</sup>, Franca Fagioli, ### ABSTRACT

**PURPOSE** Outcome of patients with localized osteosarcoma is challenging. The role of mifamurtide is still a matter of debate. Two prospective trials were carried out in Italy (ISG/OS-2) and Spain (GEIS-33) with mifamurtide in ABCB1/P-glycoprotein (Pgp)-positive patients.

**PATIENTS AND METHODS** Patients age ≤40 years with localized extremity high-grade osteosarcoma were eligible. Analysis of Pgp expression from diagnostic biopsy was centralized.

**RESULTS** From March 2013 to April 2018, 398 patients were analyzed. The median age was 14 years (range, 4-40), male/female: 238/160 (L48/10); 211 of 398 (53%) tumors were Pgp-positive, and 204 of 398 (51.3%) patients received mifamurtide. With a median follow-up of 70 months (IQR, 4.9-90 months), the 5-year EFS and OS were 65.2% (95% CI, 60.1 to 69.8) and 74.8% (95% CI, 69.8 to 79.0), respectively, with superior EFS for patients undergoing mifamurtide and chemotherapy as compared with EFS of patients undergoing chemotherapy alone (5-year EFS 71.4% v 58.3%;  $P = .0139$ ) not confirmed at multivariable analysis ( $P = .0593$ ).

**CONCLUSION** In this merged analysis with a risk-adapted strategy for nonmetastatic osteosarcoma, the group with unfavorable prognoses, identified by Pgp expression, performed well when mifamurtide, combined with HDIFO in case of poor response, was administered after surgery.

**INTRODUCTION** High-grade osteosarcoma is the most frequent primary malignant bone tumor among children and adolescents and young adults (AYAs).<sup>1-3</sup> In the past 50 years, survival has not improved, and novel therapeutic strategies are urgently needed.<sup>4-6</sup>

Histologic response to neoadjuvant chemotherapy according to Huoss has consistently shown a strong correlation with survival in patients with localized osteosarcoma.<sup>7</sup> In addition, high levels of ABCB1/P-glycoprotein (Pgp), an efflux pump that reduces the intracellular concentration of doxorubicin, demonstrated an unfavorable prognostic factor in osteosarcoma in several published series, but controversy remains as to

### FOSTER study agenda:

**Sept 2025:**  
CTIS  
initial  
submission

**From Sept to Dec 2025:**  
Files Preparation for submission for additional countries  
+ part 2 (maintenance treatment)

Awaiting CTIS feedback,  
response to RFI if necessary

**Dec/Jan 2026:**  
regulatory  
authorizations

**Jan/Feb 2026:**  
first  
amendment

**Only Part 1  
(patient registration)  
has been submitted**

#### **First batch (Sept 2025)**

- France
- Spain
- The NL
- Belgium
- Sweden
- Denmark
- Poland

#### **Second batch (Jan 2026)**

- Austria
- Finland
- Lithuania
- Norway
- Portugal
- **Italy**
- Germany
- Ireland
- Czech Republic
- Switzerland

#### **Third batch (April 2026)**

- Greece
- Hungary
- UK

## FOSTER CabOS

### Pending issues:

- ✓ The study has been in preparation for three years.  
Italy was not directly involved in the financing.  
Work package leaders must be exclusively located in Belgium, France, Spain, The NL
- ✓ We are waiting for a reply from CTIS
- ✓ Patients should have G1/G2 Signature before randomization (still waiting SOP)
- ✓ Rizzoli will provide for insurance, coordinating, monitoring, shipping and labelling drug/placebo.

Gentile dr. LuKsch,

*Le spese per medicinali dotati di A.I.C, utilizzati in una combinazione sperimentale, di cui si valuta l'efficacia e la sicurezza in una sperimentazione clinica senza scopo di lucro, non possono essere sostenute dal SSN, non applicandosi l'art. 2 comma 2 del DM 30 novembre 2021.*

Da quanto indicato nella sua email i farmaci usati non sono usati in accordo all'AIC

Il promotore può decidere se fornire i centri dei farmaci o rimborsarne il costo.

Cordiali saluti  
Ufficio sperimentazione Clinica

Milano, 3 Ottobre 2024

Rif.: Approvvigionamento di vinorelbina e ciclofosfamide per os nell'ambito del trial Inter-Ewing-1

Gentile Collega, il Protocollo Inter-EWing-1 di Euro-EWING Consortium, di cui AIEOP è National Coordinating Center (NCC) prevede - per i Pazienti che concludono la terapia di consolidamento e rispettano i criteri di eleggibilità - la possibilità di inclusione in una randomizzazione (randomizzazione "C") per una terapia di mantenimento metronomica (random 1:1), in cui metà dei pazienti riceverà il trattamento di mantenimento e metà concluderà invece il piano di trattamento; non è previsto braccio placebo.

Per i Pazienti randomizzati a ricevere la terapia di mantenimento, il trattamento consiste nella combinazione vinorelbina+ciclofosfamide per os per 6 cicli di 28 settimane ciascuna, secondo la schedula già sperimentata ampiamente nel rhabdiosarcoma nell'ambito degli studi EpSSG. La schedula prevede 6 cicli di 28 giorni ciascuno con vinorelbina 60 mg/m<sup>2</sup> x os nei giorni 1, 8 and 15, e ciclofosfamide 25 mg/m<sup>2</sup> x os /giorno x 28 giorni.

E' previsto globalmente in Europa l'arruolamento nel protocollo alla randomizzazione "C" di 450 pazienti in 7 anni, di cui la metà randomizzati per ricevere la terapia di mantenimento. Per l'Italia, stimiamo la possibilità di randomizzare per la fase del mantenimento circa 70 pazienti e trattare quindi con la terapia di mantenimento circa 35 Pazienti in tutto l'arco di tempo dello studio dei 7 anni.

I due farmaci, dotati di AIC, sono considerati nell'ambito della sperimentazione e in combinazione come farmaci IMP, e pertanto le spese per l'acquisto non possono essere sostenute dal SSN, non applicandosi l'art. 2 comma 2 del DM 30 novembre 2021 (questo è quanto mi ha risposto AIFA). Il promotore non è in grado di sostenere i costi per questa attività. Per questo motivo, per partecipare al protocollo è fondamentale sapere:

-se il Tuo Centro è in grado di sostenere con fondi propri l'acquisto dei farmaci in questione per i tuoi pazienti

-se il Tuo Centro è in grado di mantenere tracciabilità di lotti dei farmaci utilizzati

Facci sapere le tue risposte attraverso la scheda da compilare per il tuo Centro, grazie.

Un caro saluto e a presto.

Roberto Luksch

## Collaborazioni

Italian Sarcoma Group

**FIGHT  
OSTEO-  
SARCOMA  
THROUGH  
EUROPEAN  
RESEARCH**

## Paediatric Ambispective **Italian Bone Sarcoma** patients **Register** - PltBoS Reg

**Sponsor:** Associazione Italiana Ematologia Oncologia Pediatrica (AIEOP)

**Centro coordinatore:** Ospedale Infantile “Regina Margherita” - AOU Città della Salute e della Scienza Torino

**PI:** Prof. Franca Fagioli

**Disegno dello studio:** Osservazionale, multicentrico, ambispettico, non farmacologico

**Tipo di studio:** No profit

## Paediatric Ambispective **Italian Bone Sarcoma patients Register** - PltBoS Reg

### **Obiettivo primario**

- sviluppare un registro italiano ambispettico di pazienti pediatrici con diagnosi di sarcoma osseo diagnosticati in Italia dal 01/01/1989.

### **Obiettivi secondari**

- analisi dei dati clinici, terapeutici e di follow up dei pazienti inclusi nel registro nazionale, fruibili eventualmente per futuri studi prospettivi
- comparare le differenti strategie terapeutiche applicate nei centri italiani con quelle adoperate nei diversi centri di ricerca europei.

THE LANCET  
Oncology

Dear FOSTER members,

We are thrilled to officially announce that the Massimo Abate Grant, dedicated to ECIs, is being renewed for this year!

This prize will be awarded to **two ECIs** from the FOSTER consortium and will include:

- €500 dedicated to participation in the FOSTER physical meeting, which will take place in Vienna on **September 21st and 22nd, 2026**.
- An opportunity to present their work **during the plenary session of the meeting**.
- €1,000 to support the winner's research, including abstract submissions to journals, laboratory equipment, and other research-related expenses.

To apply, **please submit a short CV (1 page) and an abstract of your work on osteosarcoma** (clinical, translational, or biological) to [FosterConsortium@gustaveroussy.fr](mailto:FosterConsortium@gustaveroussy.fr) by **April 30th**. The abstract should be limited to 300 words. The FOSTER Executive Committee (EC) will select the two best abstracts.

We would also like to thank the EC and the Bone **Cancer** Research Trust (BCRT) for making this great opportunity possible!

Don't forget to apply before April 30th!

We hope to hear from many of you.

Best regards,

**Florian GAGNEUX**

Scientific Project Manager

**Clinical** Operations Office / Department of Child and Adolescent Oncology

**Gustave Roussy** / FOSTER consortium (Fight OsteoSarcoma Through European Research)

THE HOPE  
OF CURING  
CANCER  
HAS A NAME.

## Prospettive future

- Continuare l'integrazione e il consolidamento nei gruppi di ricerca EuroEwing e FOSTER
- Standardizzare i metodi di prelievo e gestione del materiale biologico, anche in allineamento con gli studi ancillari previsti nei futuri trial

## *Gruppo di Lavoro Allargato Sarcomi Ossei* Torino, 27–28 novembre 2025
